

Strategy for The Danish Society for Patient Safety 2022

Vision:

A safe healthcare system – for patients and for healthcare staff.

Mission:

To accelerate and support improvements in patient safety in healthcare.

This must be done by producing and disseminating knowledge and methods, and building competences that can support patient safety.

Strategic platform:

Due to its construction with key stakeholders across the Danish health care sector, PS! has a unique platform for collaborating on and accelerating improvements in patient safety.

Roles:

PS! has the following roles:

Expert

Inspirer

Facilitator

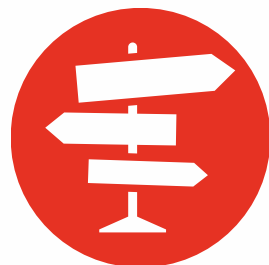

Realization of our strategy - PS!' roles

Expert: Be a link between evidence and practice

At PS! we must develop our role as a hub for knowledge about patient safety and methods to improve patient safety. The role of expert means that PS! has the knowledge or know where it can be found through networks and collaborations nationally and internationally.

PS! also supports the generation of new knowledge about patient safety challenges in collaboration with research environments. In cooperation with partners across the healthcare system, we also support the safe implementation of new methods and technologies.

Inspirer: Setting the agenda and communicating based on knowledge

Based on our expert role, PS! illuminates, articulates, sets the agenda and communicates current and future challenges and issues, and suggests solutions that the healthcare system can seek inspiration in.

PS! tests new solutions with partners that the healthcare system can be inspired by.

PS! also focuses on disseminating relevant knowledge, data and skills that will strengthen the work to improve patient safety.

Facilitator: Support implementation through capacity building and collaboration

Through education and projects, PS! facilitates and disseminates patient safety and improvement knowledge and methods, building capacity and capability to improve patient safety across the healthcare system.

PS! facilitates, creates and manages networks between key stakeholders in the healthcare system which develop, ensure and maintain a focus on patient safety and specific patient safety challenges
